

ABSTRACT

It is intended to provide a method whereby transfer efficiency can be improved under any conditions in the case
5 of transferring (in particular, transfecting) a target substance that cannot easily be transferred into cells (for example, a DNA, a polypeptide, a sugar, a complex thereof or the like). Namely, a composition for elevating the transfer efficiency of a target substance into cells which
10 contains a cell adhesion-related factor, and a device and a method using the composition.
